

KRISHISETU – Project Concept Note (Part 2)

Target Users • Key Features • Competitive Analysis • Research Gap

1. Target Users

KrishiSetu is designed for the entire contract farming ecosystem, with farmers at the center. It also serves Farmer Producer Organizations (FPOs), cooperatives, food processors, exporters, retailers, agribusinesses and government agencies promoting agricultural development.

Primary Users	Supporting Stakeholders
Small & Medium Farmers	Food Processing Companies
Farmer Producer Organizations	Exporters & Retail Chains
Agricultural Cooperatives	Government Departments
Progressive Farmers	Banks & Agri-fintechs

2. Key Features

- Verified contract discovery from trusted companies
- AI-based recommendations using crop, land size and location
- Side-by-side contract comparison dashboard
- Profitability estimation with expected returns
- Risk analysis with confidence score
- NLP-based contract summary in simple language
- Regional language and voice support
- Government scheme & subsidy recommendations
- Company verification and credibility ratings
- Notifications for new opportunities

3. Competitive Analysis

Platform	Primary Focus	Key Limitation
Agrim	B2B agri marketplace	Limited decision support
FarmERP	Enterprise contract management	Buyer-centric
Arya.ag	Grain commerce	Limited contract comparison
Plantix	Crop advisory	No contract discovery
DeHaat	Inputs & advisory	No AI contract evaluation
e-NAM	Spot market	Not pre-sowing contracts
KrishiSetu	AI decision-support	Combines all capabilities

4. Research Gap & Unique Value Proposition

Research Gap: Existing solutions address isolated problems such as advisory, enterprise management or trading. No major platform offers a farmer-first decision-support system that discovers contracts, compares them objectively, estimates profitability, explains legal clauses and evaluates risk in one place.

Why KrishiSetu Stands Out

- ✓ Independent advisor, not a marketplace

✓ Explainable AI recommendations
✓ Profitability + risk estimation
✓ Simplified contracts in regional languages
✓ Government scheme integration
✓ Farmer-first transparency
