

KRISHISETU – Project Concept Note (Part 3)

Architecture • Strategy • Business Model • Roadmap

1. High-Level System Architecture

Farmer Mobile/Web App
Contract Discovery Engine
AI Recommendation & Profitability Model
Risk Analysis + NLP Contract Summarizer
Verified Company & Govt. Scheme Database
Dashboard, Alerts & Reports

2. AI Recommendation Workflow

Inputs: Crop, Location, Land Size, Soil Details, Irrigation, Farmer Preferences.

AI compares verified contracts, estimates profitability, assigns a confidence score, identifies risks, and generates a simplified contract summary before recommending the best-fit opportunities.

3. Go-to-Market Strategy

- Pilot with one crop and one district instead of a nationwide launch.
- Partner with Farmer Producer Organizations (FPOs) for farmer onboarding.
- Collaborate with Krishi Vigyan Kendras for demonstrations and awareness.
- Onboard verified buyers with free pilot listings; monetize premium analytics later.
- Build trust through agronomists and local agricultural officers.

4. Sustainable Revenue Model

Revenue Source	Purpose
Verified Company Subscription	Premium listings & analytics
Institution Dashboard	FPOs, Banks, Cooperatives
Government/CSR Projects	Large-scale implementation
Anonymous Market Insights	Aggregated analytics (privacy-preserving)

5. Expected Benefits

- ✓ Greater transparency in contract farming.
- ✓ Better decision-making through AI.
- ✓ Reduced dependence on intermediaries.
- ✓ Improved farmer confidence and income planning.
- ✓ Digital adoption in agriculture.

6. Challenges & Mitigation

Challenges: Reliable contract data, trust, multilingual support and AI accuracy.

Mitigation: Verified partnerships, human review during pilot phase, confidence scores, explainable AI and

phased rollout.

7. Future Scope

- AI chatbot for contract queries
- Voice-first regional experience
- Blockchain contract verification
- Yield prediction using ML
- Offline mobile application
- Weather-aware recommendations
- Digital document verification & e-signatures

Conclusion

KrishiSetu aims to become an independent digital advisor for farmers by combining verified contract discovery, explainable AI, profitability estimation, risk analysis and multilingual accessibility. The project addresses a genuine gap in the Indian agricultural ecosystem and has the potential to evolve from an academic project into a scalable agritech platform.
